

QUINCLORAC 1.5L SELECT™

Post-emergent crabgrass control

Dr. Jim Brosnan and G.K Breeden, University of Tennessee

Trial Objective

To compare crabgrass post-emergent weed control of Quinclorac 1.5L Select against Drive® XLR8 at single application and at 2 applications.

Materials and Methods

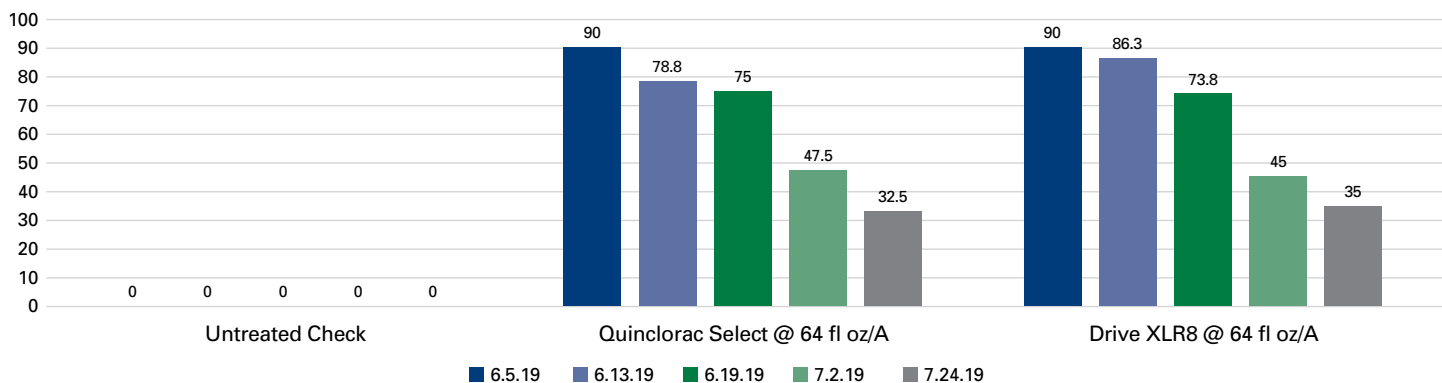

- Testing period for crabgrass control was from May 29th, 2019 through July 24th, 2019.
- Each product underwent 4 replications. There was an untreated controlled plot for herbicide comparisons. MSO were applied to each product for each application. Testing plots were 5ft by 6ft.

- Quinclorac 1.5L Select and Drive XLR8 second application was applied on June 19th 2019.

Trial Results and Conclusions

- Quinclorac 1.5L Select (1.64 fl oz per 1000 ft²) provided control statistically equal to Drive XLR8 at a single application as well as at 2 applications.
- Quinclorac 1.5L Select (1.64 fl oz per 1000 ft²) provides over 75% control of crabgrass for up to 21 days.

% Crabgrass Control - Single Application
