

TRIAD SELECT[™]

Post-emergent broadleaf weed control in turfgrass

Dr. David Gardner, The Ohio State University; Columbus, OH

Materials and Methods

- Trials were initiated by Ohio State University to measure efficacy of Triad QC Select compared to Quincept[®], trial one was initiated on June 9, 2017. Trial was done on lawn height turf infested with white clover and dandelions at the Ohio State University.

Trial Results and Conclusions

- At 35 days after treatment (DAT), Triad QC herbicide showed a significant percentage of control on both white clover and common dandelion.
- At trial conclusion Triad QC Select was providing control of white clover and dandelion which was statistically equal to the commercial standard herbicide.

White clover and dandelion control on turfgrass with Triad QC - % Control @ 35 DAT

Applied June 9, 2017 All treatments = NIS 0.25% Untreated = 0% Control
